To potential employers and perspective partners alike

I am a 24 year old junior web developer who has worked on a number of websites and apps. Soon after matriculating I attained my first tertiary qualification from Richfield Graduate institute of Technology with a specialization in Information Systems. I then went on to partake in 2 different internships with all having a central goal aimed at bettering my IT skills.

I am an extremely motivated individual who dedicates himself fully to his every day tasks, I am self motivated and goal driven. I am also a go getter who is very goal and perfection oriented person who works well in either a team or individually. Add to that natural and acquired leadership skills and a naturally commanding presence. I am also a fast learner who is not afraid of asking for help when in need.

I believe I would be a valuable addition to any company that wishes to have a forward thinking individual who thinks outside the box and has the necessary skills to navigate the modern technological obstacles that exist today. My entire educational journey and has all been about getting myself the currently relevant skills that most companies are in need of.
